

## DOCKER AND DOCKER COMPOSE COMMANDS

### Docker Commands:

**List all running Docker containers:**

```
docker ps
```

**Create the container and start it :**

```
docker run -itd --name=container_name image_name
```

**To start a shell on that container (go inside container):**

```
docker exec -it container_name bin/bash
```

**Stop Docker Container:**

```
docker stop container_id
```

**Delete a container:**

```
Docker rm container_id
```

### Docker compose commands:

**# Build the container image:** docker-compose build

**# Start the container:** docker-compose up

**# Shut down the container:** docker-compose down

### List network interfaces

```
ifconfig
```
